

ASPEN CENTER FOR PHYSICS

25TH ANNIVERSARY YEAR
2010 WINTER CONFERENCE

ON

ASTRONOMY
February 7 – 13, 2010

THE HIGH REDSHIFT UNIVERSE: A MULTI-WAVELENGTH VIEW

The goal of this conference is to bring together observers, theorists, and simulators working on all aspects of the high redshift universe. Planned topics include galaxy formation and evolution; chemical and radiative feedback; cosmic reionization; current observations of high-redshift galaxies at nearIR through radio wavelengths; and 21-cm cosmology. The central theme will be the major effect of feedback from early galaxies on the large-scale cosmic environment at early times.

Application deadline is October 31, 2009

Please complete your application at: www.aspenphys.org

jdbowman@caltech.edu
kamion@tapir.caltech.edu
ccarilli@aoc.nrao.edu

SCIENTIFIC ADVISORY COMMITTEE

Don Backer (UC Berkeley)
Frank Briggs (ANU)
Richard Ellis (Caltech)
Paul Shapiro (Texas, Austin)
Rogier Windhorst (ASU)
Stuart Wyithe (Melbourne)
Naoki Yoshida (IPMU Tokyo)
Matias Zaldarriaga (IAS)

The Aspen Center for Physics is committed to a significant participation of women and under-represented groups in all of its programs.
